per sample · 30-minute rolling median · path change (latency floor moved) · first-hop degradation · outage (gateway unreachable) · change point in daily loss share

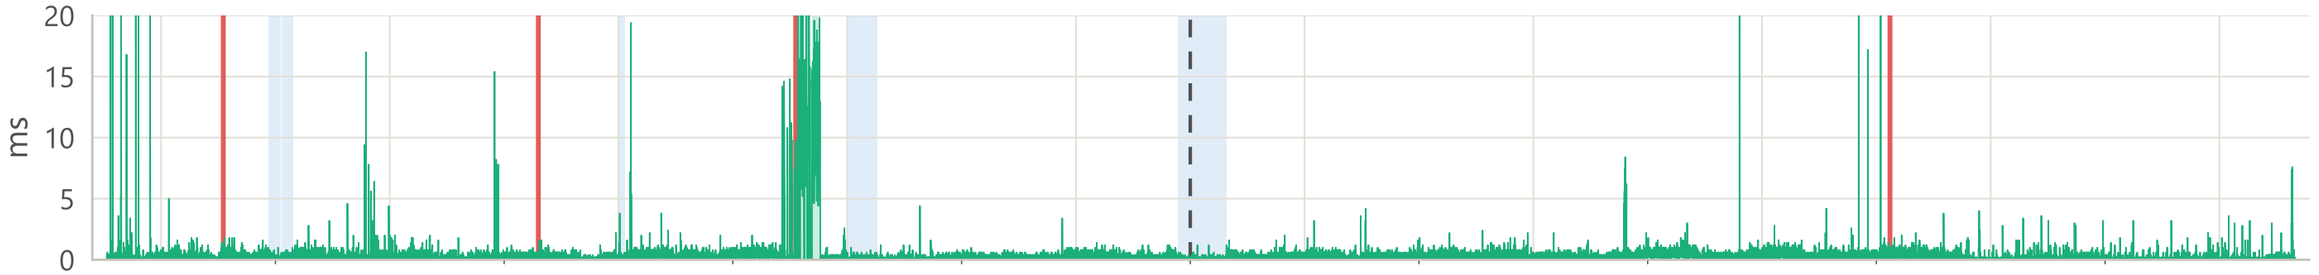

Round-trip time to 8.8.8.8 (ICMP, 10-echo mean per sample, clipped at 40 ms)

Fastest of 5 TCP handshakes to port 443 of the same host (sub-millisecond resolution)

Round-trip time to the default gateway (first hop, clipped at 20 ms)

Samples with at least one lost echo, per hour
